

TRAFFIC STATEMENT
FOR THE

Finish Line Auto Club

South of the Southwest Corner of Perimeter Drive & Pacesetter Way
Scottsdale, Arizona

1st Submittal: April 9, 2025
2nd Submittal: June 16, 2025

UCG Project Number: TR25038

Prepared for:
LGE Design-Build
1200 N. 52nd Street

Conducted by: Keith A. Winney, P.E.

I. INTRODUCTION

United Civil Group (UCG) was retained by LGE Design-Build to perform this Category 1 Transportation Impact & Mitigation Analysis ("Traffic Statement") to accompany the Development Plan Amendment request for the site located approximately 400 feet south of the southwest corner of Perimeter Drive & Pacesetter Way in Scottsdale, Arizona. The subject site is being planned for the Finish Line Auto Club; which is a high-end luxury vehicle storage user having 67 total garages and ancillary office/lounge space. Additionally, the western portion of the site is being planned with a general light industrial building, having an approximate maximum building area of 50,000 square feet.

Figure 1: Aerial View presents the location of the subject site within the context of the immediate area. The site plan depicting the proposed Finish Line Auto Club and the general light industrial building, as well as the proposed site access driveway locations, is presented in *Figure 2: Site Plan*. The figures are provided at the end of this document in *Appendix A*.

UCG performed this Traffic Statement in general accordance with the City of Scottsdale *Design Standards & Policies Manual 2018, Section 5-1.100 Traffic Impact and Mitigation Requirements*; locally accepted standards and industry practice. The major objectives of this Traffic Statement are as follows:

- Document the existing conditions of the subject site and its surroundings with respect to the existing land uses and transportation facilities.
- Estimate and compare the trips generated by the existing use of the subject site and the planned new development uses of the site.
- Provide discussion on the planned operations of the new development and the proposed site access.

II. EXISTING CONDITIONS

A. SUBJECT SITE

The approximate overall 10.39-acre Site is generally located approximately 400 feet south of the southwest corner of Perimeter Drive & Pacesetter Way; and is currently zoned I-1 PCD.

The existing use of the subject site is an approximate 127,750 square foot office building and associated parking areas. As depicted in Figure 1, the site is currently served by two full movement vehicular access driveways; one on Perimeter Drive approximately 600 feet south of Pacesetter Way, and one on Pacesetter Way approximately 725 feet north of Princess Drive. Additionally, the site currently has secondary full movement access via a shared driveway with the site to the immediate south.

B. ADJACENT STREETS

Perimeter Drive is classified as a Major Collector per the City of Scottsdale *Transportation Action Plan 2022 Functional Classification Map*. Adjacent to the subject site, the existing street section of Perimeter Drive is generally per City of Scottsdale *Design Standards & Policies Manual Section 5-3.104 and Figure 5-3.10 – Major Collectors – Urban Character*, having a five-lane fully-improved street section (two northbound lanes, two southbound lanes, and a center turn lane), with curb/gutter and sidewalk, and bicycle lanes. The posted speed limit is 35 miles per hour.

Pacesetter Way is classified as a Local Commercial/Industrial per the City of Scottsdale; however, its existing street section is generally that of a Minor Collector per City of Scottsdale *Design Standards & Policies Manual Section 5-3.105 and Figure 5-3.14 – Minor Collectors – Urban Character*. Adjacent to the subject site Pacesetter Way has a three-lane fully-improved street section (one northbound lane, one southbound lane, and a center turn lane), with curb/gutter and sidewalk, and bicycle lanes. The posted speed limit is 25 miles per hour.

III. TRIP GENERATION

A. TRIP GENERATION BY EXISTING USE OF SITE

The existing use of the subject site under the existing development plan is an approximate 127,750 square foot office building. Estimates of the site trip potential generated by the existing office building use are determined from transportation planning data within the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition, 2021*. ITE Land Use Code (LUC) 710 – *General Office Building* is utilized.

Table 1: Existing Use Trip Generation presents the estimated daily and peak hour trips generated by the existing office use of the subject site for a typical weekday.

TABLE 1: EXISTING USE TRIP GENERATION

Land Use	ITE LUC	Units	Size	Daily	AM Peak			PM Peak		
					in	out	total	in	out	total
General Office Building	710	1000s SF	127.8	1,436	182	25	207	35	169	204

General Office Building – LUC 710

AM Peak Hour	$\ln(T) = 0.86 \ln(X) + 1.16$	88% entering, 12% exiting
PM Peak Hour	$\ln(T) = 0.83 \ln(X) + 1.29$	17% entering, 83% exiting
Daily	$\ln(T) = 0.87 \ln(X) + 3.05$	50% entering, 50% exiting

B. TRIP GENERATION UNDER PROPOSED DEVELOPMENT PLAN AMENDMENT

B.1. PLANNED OPERATIONS OF FINISH LINE AUTO CLUB

The Finish Line Auto Club is a unique use, with its primary function being that of a private high-end luxury automobile storage facility, with 67 privately-owned individual garages. Ancillary uses include a private social club lounge and minor office space. The following is a general outline of the planned operations of the Finish Line Auto Club, as provided by the ownership:

- Luxury Vehicle Storage Garages
 - 67 garage units.
 - Use: The typical use of the garage is to store the luxury vehicle(s) of the garage owner. The vehicle owner will visit the garage to take out a vehicle and typically return it on the same day.
 - Frequency: The average frequency an owner will visit their garage unit is 1 per week. Access is 24 hours.
- Private Social Club and Lounge
 - 150 - 200 total Social Club members.
 - Use: Gathering lounge/patio areas for Social Club members/garage owners; traditional restaurant/bar service is not provided and it is not typically staffed, although a kitchen area is planned.
 - for the purposes of this study as a conservative approach, social club visits are assumed to occur separately from visits to get a vehicle from the private garage unit, although an owner may visit their garage and the Social Club in a single visit.
 - Hours: Utilization of the Social Club will typically be from noon until 7pm, with alternative hours and use available.
 - Frequency: On an average day approximately 25 social members will visit the lounge. Social Club visits are typically spread over the course of the day.
- Employees
 - The number of employees is expected to be a maximum of seven (7) on a typical day.
 - For the purposes of this study; in addition to arriving and departing from work, two (2) additional vehicle outings would be expected to be made by each employee throughout the day (lunch, errands, etc.).
- Miscellaneous Service Vehicle Trips
 - Miscellaneous Service Vehicles that visit the site may include car deliveries, food/supply deliveries, mechanic visits, on-site car maintenance, and facility management vehicles, etc.
 - Frequency: No definitive daily service vehicle is expected to be scheduled to visit the site each day; however, for the purposes of this study as a conservative approach, up to five (5) services vehicles are assumed to visit the site on any given day.

B.2. TRIP GENERATION ESTIMATE OF THE FINISH LINE AUTO CLUB

The trip generation of the planned Finish Line Auto Club is estimated based on the planned operations on a typical day, as provided above in section III.B.1. Due to the unique nature of the development, an established use and associated LUC within the ITE Trip Generation Manual is not applicable. The following are the estimated daily trips generated:

- Luxury Vehicle Storage Garage (67 Garages)
 - 1 weekly visit per owner = 67 weekly visits (1 trip arriving; 1 trip departing per visit).
 - 134 weekly trips total
 - **20 daily trips [a]**
 - Each visit assumes the owners take out one vehicle from their garage, leaves the site, then returns to the garage on the same day (1 trip departing; 1 trip arriving).
 - 134 weekly trips total
 - **20 daily trips [b]**
- Private Social Club and Lounge
 - 25 daily visits by social club members (1 trip arriving; 1 trip departing)
 - **50 daily trips [c]**
- Employees
 - 7 employees on any given day; each employee makes 2 other outings during the day (lunch, errand); (1 trip arriving; 1 trip departing per each).
 - **42 daily trips [d]**
- Miscellaneous Service Vehicles
 - Up to 5 service vehicles on any given day; (1 trip arriving; 1 trip departing per each).
 - **10 daily trips [e]**
- **142 total daily trips expected on a typical day [a+b+c+d+e]**

Table 2: Finish Line Auto Club Trip Generation Estimate on the following page presents the tabulated estimated daily and peak hour trips generated by the proposed use as described above. Note: the days of the week that the site may be expected to experience the most usage is not known; for the purposes of this Traffic Statement, the peak site usage is assumed to occur on a typical weekday. Additionally, it is expected that the visitors to the private garages and Social Club will generally be spread out over the course of a typical day. For the purposes of this study, the estimated trips generated during the AM and PM peak hours are each assumed to be 10% of the estimated daily total.

TABLE 2: FINISH LINE AUTO CLUB TRIP GENERATION ESTIMATE

Land Use	ITE LUC	Size	Daily	AM Peak*			PM Peak*		
				in	out	total	in	out	total
Finish Line Auto Club	N/A	67 Private Garages and a Social Club Lounge Area	142	7	7	14*	7	7	14*

* It is assumed the visitation and use of the Finish Line Auto Club will generally be spread over the course of a typical day; the peak hour is assumed to be 10% of the estimated overall daily trip volume.

B.3. TRIP GENERATION ESTIMATE OF THE GENERAL LIGHT INDUSTRIAL BUILDING USE

In addition to the Finish Line Auto Club, the Development Plan Amendment includes a general light industrial building on the western side of the site having an approximate maximum building area of 50,000 square feet. Estimates of the trip potential generated by general light industrial building use are determined from transportation planning data within the ITE *Trip Generation Manual, 11th Edition, 2021*. ITE Land Use Code (LUC) 110 – *General Light Industrial* is utilized.

Table 3: *General Light Industrial Building Trip Generation* presents the estimated daily and peak hour trips generated by the planned general light industrial building use for a typical weekday.

TABLE 3: GENERAL LIGHT INDUSTRIAL BUILDING TRIP GENERATION

Land Use	ITE LUC	Units	Size	Daily	AM Peak			PM Peak		
					in	out	total	in	out	total
General Light Industrial	110	1000s SF	50	238	33	4	37	3	21	24

General Light Industrial – LUC 110

AM Peak Hour	$T = 0.68(X) + 3.81$	88% entering, 12% exiting
PM Peak Hour	$\ln(T) = 0.72 \ln(X) + 0.38$	14% entering, 86% exiting
Daily	$T = 3.76(X) + 50.47$	50% entering, 50% exiting

Table 4: Overall Trip Generation presents the estimated daily and peak hour trips generated by the site considering the overall Development Plan Amendment, which includes the Finish Line Auto Club and the general light industrial building, for a typical weekday.

TABLE 4: OVERALL TRIP GENERATION

Land Use	ITE LUC	Units	Size	Daily	AM Peak			PM Peak		
					in	out	total	in	out	total
Finish Line Auto	N/A	67 Private Garages and Social Club		142	7	7	14	7	7	14
General Light Industrial	110	1000s SF	50	238	33	4	37	3	21	24
TOTAL				380	40	11	51	10	28	38

Overall, the planned site is estimated to generate 51 trips in the AM peak hour (40 in/11 out), 38 trips in the PM peak hour (10 in/28 out), and 380 daily trips on a typical day.

C. TRIP GENERATION COMPARISON

A trip generation comparison between the existing development plan, and the proposed Development Plan Amendment, which is planned to include the Finish Line Auto Club and a general light industrial building, is presented below in *Table 5: Trip Generation Comparison*.

TABLE 5: TRIP GENERATION COMPARISON

Lane Use	Daily	AM Peak			PM Peak		
		In	Out	Total	In	Out	Total
Existing Development Plan - General Office Building	1,436	182	25	207	35	169	204
Proposed Development Plan Amendment – Finish Line Auto Club and General Light Industrial Building	380	40	11	51	10	28	38
Total Difference	-1,056	-142	-14	-156	-25	-141	-166

As presented above in Table 5, the uses of the proposed Development Plan Amendment are estimated to generate 1,056 fewer daily trips, 156 fewer AM Peak Hour trips, and 166 fewer PM peak hour trips than the existing development of the site.

IV. SITE ACCESS

As shown in the site plan in Figure 2, the planned Finish Line Auto Club use is proposing to utilize a single driveway on Perimeter Drive as the primary access point, which will be shifted from the existing driveway location approximately 100 feet south to align with the existing driveway across Perimeter Drive to the east. For security measures, the existing interior access to the site on the southern boundary is proposed to be removed. As presented above in Section III, given the planned private exclusive high-end luxury storage garage use, and its associated operations, very low vehicle trips are estimated to be generated by the Finish Line Auto Club portion of the site on a typical day and during the peak hours (5 trips in and 6 trips out during a peak hour); the single planned access driveway on Perimeter Drive will accommodate the projected site trips.

Two access driveways connecting to Pacesetter Way are proposed to serve the general light industrial building, replacing the existing single access driveway of this portion of the site. The northern access driveway is planned to be generally aligned with an existing driveway across the street. The southern access driveway is planned to be located approximately 465 feet south (centerline to centerline) of the northern access driveway. The proposed site access driveway locations generally conform to Section 5-3.201 of the *Design Standards & Policies Manual*, the exception is the spacing to the existing adjacent driveway to the north, which is approximately 115 feet north of the planned northern access driveway (minimum spacing of 125 feet is typically required). Given the relatively low proposed site-generated traffic volume of the general light industrial portion of the site, as well as the relatively low volume at the north-adjacent driveway, and on Pacesetter Way in general, in addition to aligning the northern access driveway with the existing driveway located across Pacesetter Way, the proposed access driveway spacing is acceptable.

V. CONCLUSIONS

This Traffic Statement (Category 1 Transportation Impact & Mitigation Analysis) was prepared to accompany the Development Plan Amendment application for the subject site located approximately 400 feet south of the southwest corner of Perimeter Drive & Pacesetter Way in Scottsdale, Arizona. The planned new uses for the site include the Finish Line Auto Club, which is a high-end luxury vehicle storage facility having 67 total garages and ancillary office/lounge space. Additionally, the western portion of the site is being planned with a general light industrial building, having an approximate maximum building area of 50,000 square feet.

The trip generation of the planned Finish Line Auto Club uses was estimated based on information related to the planned operations and facility visit potential on a typical day as provided per ownership; no applicable land use code is provided in the ITE Trip Generation Manual for trip generation estimation due to the unique land use. The trip generation of the planned general light industrial building on the western

portion of the subject site was estimated based on ITE Trip Generation Manual Land Use Code 110 – General Light Industrial.

The Finish Line Auto Club use is estimated to generate 14 trips in the AM peak hour, 14 trips in the PM peak hour and 142 daily trips on a typical day. The general light industrial building use is estimated to generate 37 trips in the AM peak hour, 24 trips in the PM peak hour and 238 daily trips on a typical day. Combined, the overall subject site per the Development Plan Amendment is estimated to generate 51 trips in the AM peak hour, 38 trips in the PM peak hour, and 380 daily trips on a typical day.

The estimated site trips were compared to those of the existing land use (a 127,750 square foot office building). In comparison to the existing office use, the Finish Line Auto Club and new general light industrial building is estimated to generate 156 fewer AM peak hour trips, 166 fewer PM peak hour trips, and 1,056 fewer daily trips.

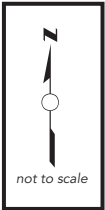

Perimeter Drive and Pacesetter Way adjacent to the subject site are expected to have sufficient available capacity to accommodate the projected daily site trips of the planned uses of the subject site, and undue detrimental impacts are not anticipated to the existing surrounding street transportation network.
