

FINISH LINE AUTO CLUB DEVELOPMENT PLAN AMENDMENT PROJECT NARRATIVE

For property located at 17600 N. Perimeter Drive in Perimeter Center, Scottsdale, AZ

Request

Amend the development plan and remove the amended standards approved in case 19-ZN-2004 for property zoned with Planned Community District with comparable Industrial Park District (PCD I-1)

Case 1059-PA-2024

First Submittal: April 15, 2025

Second Submittal: June 18, 2025

Request

The request by Finish Line Auto Club ("Developer") is to amend the approved development plan on Maricopa County Assessor's Parcel #'s 215-07-230 ("Property") within the City of Scottsdale's ("City") Perimeter Center development. The property is positioned between Perimeter Center Drive and N Pacesetter Way. The development plan amendment aims to leverage the existing I-1 PCD zoning to permit uses allowed within this zoning district. The proposal includes a five-building campus dedicated to a private auto club, along with a flex-industrial/office building totaling 52,000 square feet, or a combination of buildings not exceeding that total. The previous development plan included one (1) 58'-7" high office building and associated surface covered and uncovered parking. The previous case approved amended development standards including building heights. The proposal aims to revert to I-1 zoning development standards, allowing the five (5) buildings, the flex-industrial building and associated parking to comply with no need for any amended development standards.

Background/History

The Property is located within the Perimeter Center, which is located on the inside curve of the Loop 101 highway. The Perimeter Center was originally zoned in the late 1980's as part of the larger Core South master plan that included a much larger land mass of properties along the north and south sides of the (at the time) future freeway alignment. Although I-1 zoning is the primary zoning designation for a majority of lots within the Perimeter Center, many of the lots developed out as mainly offices with ancillary commercial and hotel uses. The Property is currently developed for the use of office.

The previous zoning case, 19-ZN-2004, sought to amend the Planned Community Development (PCD) standards for Perimeter Center to permit an increase in height for the property. The elevated position of the freeway in this area helps to mitigate building mass and preserve mountain views. Currently, the approved height for the property is 50 feet 7 inches (clear) and 58 feet 7 inches, including mechanical screening. The office building directly south of this property was a part of the 19-ZN-2004 zoning case and built to the additional amended height standards from the zoning case.

Surrounding Context

The Property is situated at the middle of the Perimeter Center. The adjacent parcels are primarily office buildings with a church to the north. Access to the 101 freeway is easily assessable from Princesses Drive south of the site. Most of the parcels in this area of the Perimeter Center have similar I-1 PCD zoning. The nearest residence is located approximately 550 feet to the northwest of the western property line.

2035 General Plan

The Property is designated as Light Industrial/Office on the City's General Plan Future Land Use Map (see below). The development plan amendment is consistent with this land use designation. The Employment-Light Industrial/Office land use areas provide a variety of employment opportunities, business enterprises, aviation uses [see Greater Airpark Character Area Plan], light manufacturing, warehousing, and other light industrial and heavy commercial type activities. Light Industrial/Office uses should be located and designed to limit impacts on and access to residential neighborhoods. These areas should also have excellent access to labor pools and transportation networks. Major streets serving Light Industrial/Office areas should accommodate truck traffic. Transit facilities and other multimodal options are also needed at significant employment centers to accommodate commuters and minimize traffic congestion. The parcels within Perimeter Center with this land use designation include C-2, C-O, I-1, and PCP. All of these zoning districts allows for the implementation of the goals of the Light Industrial/Office land use designation.

2035 General Plan Land Use Map

Furthermore, with the construction of the Loop 101/Pima Freeway and a concentrated mixed-use land use pattern near the Scottsdale Airport, this area, more commonly known as the Greater Airpark Character Area, has emerged as one of the most significant employment and business cores within the State of Arizona. These regional land uses, along with the city's land preservation efforts, have contributed to Scottsdale's economy,

which in turn contributes to a high quality of life for residents. The Light Industrial/Office land use designation over the Perimeter Center area also creates the necessary buffer and non-noise sensitive uses at the north end of the airports runway.

Character and Design Element

The following are the applicable goals and approaches from the Character and Design Element of the City's General Plan.

Goal CD 1. Determine the appropriateness of all development in terms of community goals, surrounding area character, and the specific context of the surrounding neighborhood.

Response: The proposal is an appropriate modification to an approved development plan. The previous development plan included a more office-oriented development with taller buildings and larger parking fields. The proposal seeks lower scale buildings and less parking fields. With the site designed to internalize the future uses, the proposal will have less impacts on surrounding properties.

Goal CD 2. Develop, maintain, and refine Character Areas and Character Area Plans to foster quality development and consistent character and context within various areas of the community.

Response: The proposed development plan implements the Greater Airpark Character Plan by providing for a variety of industrial park type uses along a major freeway corridor. The development plan will maintain the variety of employment type uses within the Perimeter Center. The proposed land use is prevalent in the Airpark and is appropriately placed away from residential uses.

CD 3.1 Strengthen Scottsdale's economic and environmental attributes, distinctive character, and attractiveness through collaborative site planning and design.

Response: The Developer can significantly enhance Scottsdale's economic and environmental attributes, as well as its distinctive character and overall attractiveness, through several key approaches in collaborative site planning and design. The design of the club can reflect Scottsdale's unique character, incorporating local architecture and landscaping that complements the surrounding environment. This thoughtful design can enhance the aesthetic appeal of the area, making it more attractive to residents and visitors alike.

Land Use Element

Goal LU 1. Enhance Scottsdale's economic viability by encouraging land uses that reinforce the city's reputation as the premier international tourist destination in the Southwest and sustain the city's role as a regional cultural center and economic hub. Land uses should be compatible with Scottsdale's character and physical appearance.

Response: The goal of the amendment is to redevelop the property into a premier meeting place for like-minded car enthusiasts, further enhancing Scottsdale's reputation as the leading tourist destination in the Southwest. With a large community of auto collectors and the well-known Barrett-Jackson auction, this project aims to support Scottsdale's economic viability by catering to the social and recreational interests of collectors, thereby promoting a high quality of life. Finish Line Auto Club, the preeminent collector car storage developer and operator in the United States, will bring its expertise to this project, creating a "Best in Class" facility that sets a new standard for car storage in Scottsdale. This development will not only reinforce Scottsdale's status as an international tourist destination but also sustain its role as a regional cultural center and economic hub.

The Auto Club will feature interior shared common areas designed to encourage interaction among owners, providing spaces where members can come together to socialize, share their passion for cars, and build community. From time to time, the facility may host special events to further engage members and the broader automotive community. Should car clubs or sponsors be involved in any event, the Auto Club will comply with the City's Special Events policy and obtain the appropriate permits in advance. All gatherings will be managed to ensure they do not adversely affect the surrounding area, with no activities spilling beyond the site boundaries.

The previous office building was significantly over-parked relative to actual demand. In contrast, the proposed site plan includes a modest increase in parking to accommodate owners' guests and occasional special events, all in accordance with the City of Scottsdale's Special Events policy. This adjustment is a measured response to functional needs while ensuring the site is not over-parked. Parking is thoughtfully integrated to support usability without overwhelming the overall development or the surrounding area.

Goal LU 4. Develop context appropriate land use patterns that support a variety of compatible mobility choices and services.

Response: The proposal includes developing land uses in conformance with the Property's existing zoning and the City's General Plan Land Use designation. The proposal is context appropriate and does not request any amended development standards that would alter land use patterns in the area.

Goal LU 6. Attract and retain diverse employment, business, and retail land uses to improve the economic well-being of Scottsdale's residents.

Response: A private auto club and a flex-industrial space can enhance Scottsdale's economic well-being by attracting diverse employment and business opportunities. The auto club on the eastern portion of the Property, serves as a unique destination that draws visitors, creating demand for related businesses such as restaurants, and retail shops, which generates jobs and stimulates local economic activity. The flex-industrial building proposed on the western portion of the site, offers adaptable space for various businesses, from light

manufacturing to creative offices, fostering innovation and entrepreneurship. This versatility attracts diverse tenants, further increasing employment opportunities.

Economic Vitality Element – Goals and Approaches

Goal EV 1. Foster Scottsdale's resiliency to economic change through support of our core industries (e.g., tourism, healthcare, bio/life sciences, advanced business services), assets, regional competitiveness, and economic diversity.

Response: A private auto club and a flex-industrial building can enhance Scottsdale's resiliency to economic change by supporting core industries such as tourism, healthcare, bio/life sciences, and advanced business services. The auto club attracts tourism and events for club members, bolstering the local economy and complementing Scottsdale's existing attractions. This not only draws visitors but also encourages spending in nearby businesses, supporting the tourism sector. The flex-industrial building provides adaptable space for companies in growing fields, such as healthcare, distribution and/or bio/life sciences. This flexibility allows businesses to respond quickly to market demands, fostering innovation and attracting new talent. By accommodating a range of industries, the building promotes economic diversity, reducing dependence on any single sector.

EV 1.2 Support retention and expansion of established businesses, and provide resources for businesses to adapt to changing market conditions.

Response: A private auto club and flex industrial space can support the retention and expansion of established businesses while providing resources for adapting to changing market conditions in several ways. The auto club creates a vibrant community hub that attracts automotive enthusiasts and visitors, which benefits nearby businesses. The flex-industrial space offers adaptable environments that can accommodate businesses of varying sizes and needs, allowing them to scale operations or pivot as market demands shift. With flexible layouts, businesses can easily modify their space for new purposes, whether that involves expanding production capabilities or reconfiguring offices for remote work. Both developments can provide access to shared resources, such as meeting spaces, technology, and business support services. This collaborative atmosphere encourages innovation and knowledge sharing, equipping businesses with the tools they need to thrive in a dynamic market.

Greater Airpark Character Area Plan

The Property falls within the Greater Airpark Character Area plan ("GACAP") limits. The following are some responses to the applicable goals and policies within the GACAP.

GOAL LU 1: Maintain and expand the Greater Airpark's role as a national and international economic destination through appropriate land uses, development, and revitalization.

- Policy LU 1.1 Maintain and expand the diversity of land uses in the Greater Airpark.
- Policy LU 1.2 Support a mix of uses within the Greater Airpark that promote a sense of community and economic efficiency, such as clustering similar/supportive uses and incorporating residential intended for the area's workforce, where appropriate.
- Policy LU 1.3 Promote development intensities supportive of existing and future market needs.
- Policy LU 1.4 Encourage the redevelopment of underutilized land to more productive uses.
- Policy LU 1.5 Maintain and continue to foster dialogue between the City of Scottsdale and Arizona State Land Department to facilitate innovative use and development of State-owned land.
- Policy LU 1.6 Encourage the assemblage of small, inefficient parcels and the replacement of obsolete structures in the Greater Airpark utilizing strategies including, but not limited to, development flexibility and expedited processing of proposals.
- Policy LU 1.7 Encourage adaptive reuse of buildings.
- Policy LU 1.8 Prevent erosion of Greater Airpark Employment land uses through land use regulations, such as limiting retail and restaurants in areas designated for employment.

Response: A private auto club and flex-industrial space can enhance the Greater Airpark's status as a national and international economic destination by promoting appropriate land uses and revitalization. The auto club attracts visitors and businesses, enriching the area's community and supporting diverse land uses. By fostering a mix of uses, these developments encourage economic efficiency and community cohesion. The flex-industrial space accommodates a variety of businesses, adapting to market needs and promoting the redevelopment of underutilized land. Collaboration between the City of Scottsdale and the Arizona State Land Department can facilitate innovative use of State-owned land. Strategies such as assembling small parcels and adaptive reuse of buildings can revitalize the area.

Implementing land use regulations to limit retail and restaurant developments in employment-designated areas helps preserve the Greater Airpark's role as a vital economic hub. By prioritizing space for office, industrial, and other job-generating uses, the City supports a balanced and sustainable business environment. While retail and dining uses are valuable as supporting amenities, limiting their expansion ensures they do not displace core employment functions, helping to foster long-term economic growth and business diversity in the area.

Greater Airpark Land Use Plan

GOAL LU 4 Utilize development types to guide the physical and built form of the Greater Airpark

- Policy LU 4.3 Encourage higher-scale Type C development in areas with access to major transportation corridors and where lower-scale residential areas will be buffered from higher-scale development.
- Policy LU 4.4 Support transitions in scale between development types.
- Policy LU 4.6 Transitions between development types should incorporate a blending in context of each development type, and integrate the characteristics between them through appropriate site and building design.
- Policy LU 4.7 Encourage greater visual variety between employment/commercial land uses and residential neighborhoods, and avoid continuous building shapes and mass adjacent to residential neighborhoods.

Response: The Property falls within the Type C development type within the Development Types map of the GACAP. The approved development plan provides for larger scale and taller buildings consistent with the Type C development designation. The proposed

development seeks to add to the total number of buildings and revert development standards to code. The Property will develop in a manner consistent with the surrounding business and industrial park uses. The development plan will have a less imposing presence on the travelers of the Loop 101 freeway and adjacent property owners.

Greater Airpark Conceptual Development Types

GOAL EV 3 Preserve and enhance tourism and visitor experiences of the Greater Airpark.

- Policy EV 3.2 Encourage complementary uses, such as specialty retail and hotels, to locate in the Greater Airpark in order to support tourist attractions.

Response: Scottsdale already hosts a number of high-profile events, such as the Barrett-Jackson Auction, Waste Management Phoenix Open, and Scottsdale Arabian Horse Show, and the auto club could position itself as a natural extension of this lineup. It could become a venue for offshoot events tied to these existing attractions, such as VIP car-related experiences for high-end clientele attending the golf tournament or auction. This would further bolster the Greater Airpark as a tourism hub while tapping into the local culture of luxury and exclusivity.

The GACAP definition of Employment is as follows:

Employment (EMP) includes an array of office, commercial, warehousing, and light industrial land uses that provide opportunities for business enterprises, as well as regional and local jobs. These areas should have access to regional multi-modal transportation

systems, including access for truck traffic and transit facilities. Residential is not appropriate in employment areas. Employment is appropriate adjacent to the Aviation Land Use area and within the Airport's 55 DNL areas or higher.

Response: The Property falls within the EMP land use designation of the GACAP. The proposed private auto club, flex-industrial buildings and surrounding adjacent office uses have met the definition of EMP by providing for an 'array' of office and industrial uses that provide opportunities for business enterprises, as well as regional and local jobs. By reverting to code for the development standards, the proposed development plan is an appropriate change from a building height and usage standpoint based on the Property's location.

Employment Core

■ **Employment Cores** are primary employment centers for the city. These areas are predominately concentrated in the Greater Airpark Character Area, a mixed-use employment core with primary freeway access, as well as around other major employment campuses, such as the Mayo Clinic and General Dynamics. Employment Cores support a wide range of activities, such as aviation, light-industrial, and regional- and community-level employment uses. These areas consist of multi-functional buildings with an emphasis on technology and corporate character. Taller building heights are found within the core, and low-scale building heights are typically found within the transition areas adjacent to Rural and Suburban Character Types. The Greater Airpark Character Area Plan denotes appropriate locations for height and intensity in the Airpark area. (See also: Growth Areas Element).

PCD Criteria

Section 5.2104 of the Zoning Ordinance states that before approval or modified approval of an application for a proposed P-C District, the Planning Commission and the City Council must find:

- A. That the development proposed is in substantial harmony with the General Plan, and can be coordinated with existing and planned development of surrounding areas.

Response: The proposed development plan amendment is in substantial harmony with the General Plan's 'Employment: light industrial/office' land use designation. The proposal intends to place airpark type development within the Greater Airpark character area plan. The development plan amendment would be less intense to the existing use of the Property.

- B. That the streets and thoroughfares proposed are suitable and adequate to serve the proposed uses and the anticipated traffic which will be generated thereby.

Response: The street system in this area and street access to the Property has been established for over 20 years. Princess Drive provides direct access to the Loop 101 freeway. The properties access and share access points are off minor collector roads for safe and convenient access for the community.

C. The Planning Commission and City Council shall further find that the facts submitted with the application and presented at the hearing establish beyond reasonable doubt that:

1. In the case of proposed residential development, that such development will constitute a residential environment of sustained desirability and stability; that it will be in harmony with the character of the surrounding area; and that the sites proposed for public facilities, such as schools, playgrounds and parks, are adequate to serve the anticipated population. The Planning Commission and City Council shall be presented written acknowledgment of this from the appropriate school district, the Scottsdale Parks and Recreation Commission and any other responsible agency.

Response: There is no residential component to this proposal.

2. In the case of proposed industrial or research uses, that such development will be appropriate in area, location and overall planning to the purpose intended; and that the design and development standards are such as to create an industrial environment of sustained desirability and stability.

Response: Although the request is to implement the existing industrial park zoning, the request seeks no amending to the development standards and effectively create an industrial environment of sustained desirability and stability. The site has been zoned industrial park district since the Perimeter Centers inception and the proposal will implement that land use.

3. In the case of proposed commercial, educational, cultural, recreational and other nonresidential uses, that such development will be appropriate in area, location and overall planning to the purpose intended; and that such development will be in harmony with the character of the surrounding areas.

Response: The proposed development plan amendment seeks to develop in full conformance with the existing zoning. The proposal removes a previously approved development plan that sought alternative heights to code for buildings located on the Property, while also permitting additional structures. The proposed development plan will be in harmony with the character of the surrounding areas

Development Plan Proposal

The proposal includes a five-building campus dedicated to a private auto club, along with a flex-industrial building totaling 52,000 square feet, or a combination of buildings not

exceeding that total, on the 10.4± acre site. The Property will be accessed off an existing driveway on Perimeter Drive for the private auto club and two existing drives on Pacesetter for the flex-industrial use. The development plan is designed to feature internal loading bays that are oriented toward the back of the auto club, ensuring that they do not face the streets. This layout minimizes visual impact and maintains the aesthetic appeal of the area while providing convenient access for deliveries and operations.

The buildings will comply with existing zoning regulations, ensuring alignment with established standards for height, setbacks, and permitted uses while promoting harmonious integration with the surrounding, existing buildings. By conforming to current zoning regulations, the development can optimize land use and contribute positively to the area's overall economic vitality. The buildings will be designed to fit seamlessly within the existing framework, promoting harmonious integration with neighboring properties and infrastructure. This strategic approach not only supports the goals of the project but also reinforces the long-term stability and attractiveness of the community.

Site Plan

The site plan will create five (5) buildings for the auto club use and 52,000 square feet of industrial space, consistent with the existing zoning. The buildings and their associated parking and loading areas are oriented to not impact the surrounding properties or existing access points. The site plan will fully comply with all existing I-1 development standards, ensuring that it meets the regulatory requirements for zoning, land use, and design. The proposal is for a high-end car storage club and will not use the facility for any public sales, leasing or repair.

Architectural Character

The site features five buildings, with a central structure that includes individual garage units and a three-story clubhouse. The adjacent four buildings are standalone garage units. The architectural design is defined by the use of honest materials such as concrete masonry block, metal exterior paneling, steel, and glass. These materials contribute to a modern, durable aesthetic while maintaining a connection to the surrounding environment.

The massing of the project is thoughtfully broken down through both formal strategies and the application of color and material blocking. The use of neutral and warm grey tones helps integrate the buildings with the desert landscape, ensuring the design complements the natural surroundings while creating a visually interesting composition.

Sensitive Design Principals

To create a more inviting and functional design, the central building features a deep projection at the clubhouse entry, which provides a recessed, shaded area. This move not only enhances the visual appeal but also promotes comfort by offering protection from the sun. Additionally, vertical shade fins are placed on the east-facing facade of the clubhouse to provide passive shading, reducing solar heat gain while enhancing the building's overall efficiency. To further break up the massing along the street frontage,

additional glazing is incorporated on the rear of the street-facing garages, softening the visual impact of the building and promoting a more human-scaled environment.

Economic Impact

The combination of 52,000 square feet of flex-industrial space and a private auto club can significantly impact the city's economy by attracting diverse businesses, creating jobs, and generating increased local spending. The flex-industrial space offers adaptable environments for various industries, fostering innovation and entrepreneurship, which can lead to job creation and economic diversification. The private auto club serves as a unique attraction, drawing visitors and automotive enthusiasts to the area, which boosts tourism and stimulates spending at nearby restaurants, shops, and services. This influx of visitors not only enhances local businesses but also contributes to tax revenues for the city.

Additionally, both developments can foster collaboration and networking among businesses, creating synergies that further stimulate economic activity. By enhancing the overall attractiveness of the area, this combination supports long-term economic growth and stability for the city.

Circulation

There will be no change to the circulation network surrounding the Property. The site plan will continue to provide cross access from Perimeter Drive and Pacesetter Way. No roadway improvements are required for this proposal.

Neighborhood Outreach

We have submitted a comprehensive Citizen Participation Plan as part of this submittal. Our initial open house was held on February 3, 2025, at the Perimeter Center's Hilton Garden Inn, located west of the Property. During the meeting, the developer's representatives were present to discuss the proposal with attendees. There were twelve (12) attendees at the open house, including neighboring property owners within the Perimeter Center and a couple from the residential neighborhood to the west. Everyone attended to gather more information on the proposal and to better understand how the property's redevelopment could impact the surrounding areas. The majority of attendees expressed no concerns with the proposal. One (1) adjacent property owner raised concerns regarding the change in land use from the existing office building to the proposed development.

In addition to the public outreach efforts, the application is currently under review by the Perimeter Center Association to ensure that the proposed design and character of the project are consistent with the architectural and aesthetic standards of the broader Perimeter Center community. We will continue to provide updates on citizen outreach and stakeholder feedback as the case progresses through the City's submittal and review process.

Summary & Conclusion

The proposal for a five-building campus dedicated to a private auto club, along with 52,000 square feet of flex-industrial space, is thoughtfully designed to enhance the community while complying with existing zoning regulations. The site plan effectively utilizes the existing access points on Perimeter Drive and Pacesetter Way, with internal loading bays positioned to minimize visual impact and maintain the area's aesthetic appeal.

This development is poised to make a significant economic impact by attracting diverse businesses, creating jobs, and increasing local spending. The flex-industrial space will foster innovation and entrepreneurship, while the auto club will draw visitors, boosting tourism and supporting local businesses. Together, these elements will contribute to a more vibrant local economy and generate valuable tax revenues for the city.

Importantly, the circulation network surrounding the property will remain unchanged, ensuring that access remains seamless and efficient. With no required roadway improvements, this proposal supports sustainable growth and stability in the area, ultimately benefiting both the community and its economy for years to come.
